

Berkeley Bicycle Plan 2017 MTC Planning Innovations

October 26, 2017

CITY OF BERKELEY ***BICYCLE PLAN***

2017

PURPOSE AND NEED

Total Commuters: 54,583

Pedestrian Commuters: 8,842

Walking Mode Share 16.2%

Bicycle Commuters: 4,640

Bicycling Mode Share 8.5%

Drive Commuters: 23,307

Driving Mode Share 42.7%

Public Transit Commuters: 11,353

Public Transit Mode Share 20.8%

Source: U.S. Census Bureau, 2014 American Community Survey

Cycling Commuters

Cities (of 100,000 Population or More) by Percentage of People Biking to Work

PURPOSE AND NEED

8.5% Bicycle Commute to Work Mode Share (2nd highest in US)

58% Increase In Bicycle Counts (2005-2015)

163 Bicycle Injury & Fatality Collisions Per Year (2011-2016)

Sources: US Census Bureau American Community Survey; City of Berkeley Bicycle Counts; UC Berkeley Transportation Survey; SWITRS Traffic Collision Data

Update Required for Funding (Caltrans, MTC, Alameda CTC)

PURPOSE AND NEED

EXISTING BIKEWAY NETWORK

ELEMENTS OF BICYCLE BOULEVARDS

Elements of Bicycle Boulevards

DISTINCT VISUAL IDENTITY

Unique pavement markings and wayfinding signs increase visibility of Bicycle Boulevard routes, assist with navigation, and alert drivers that the roadway is a priority route for people bicycling.

SAFE, CONVENIENT CROSSINGS

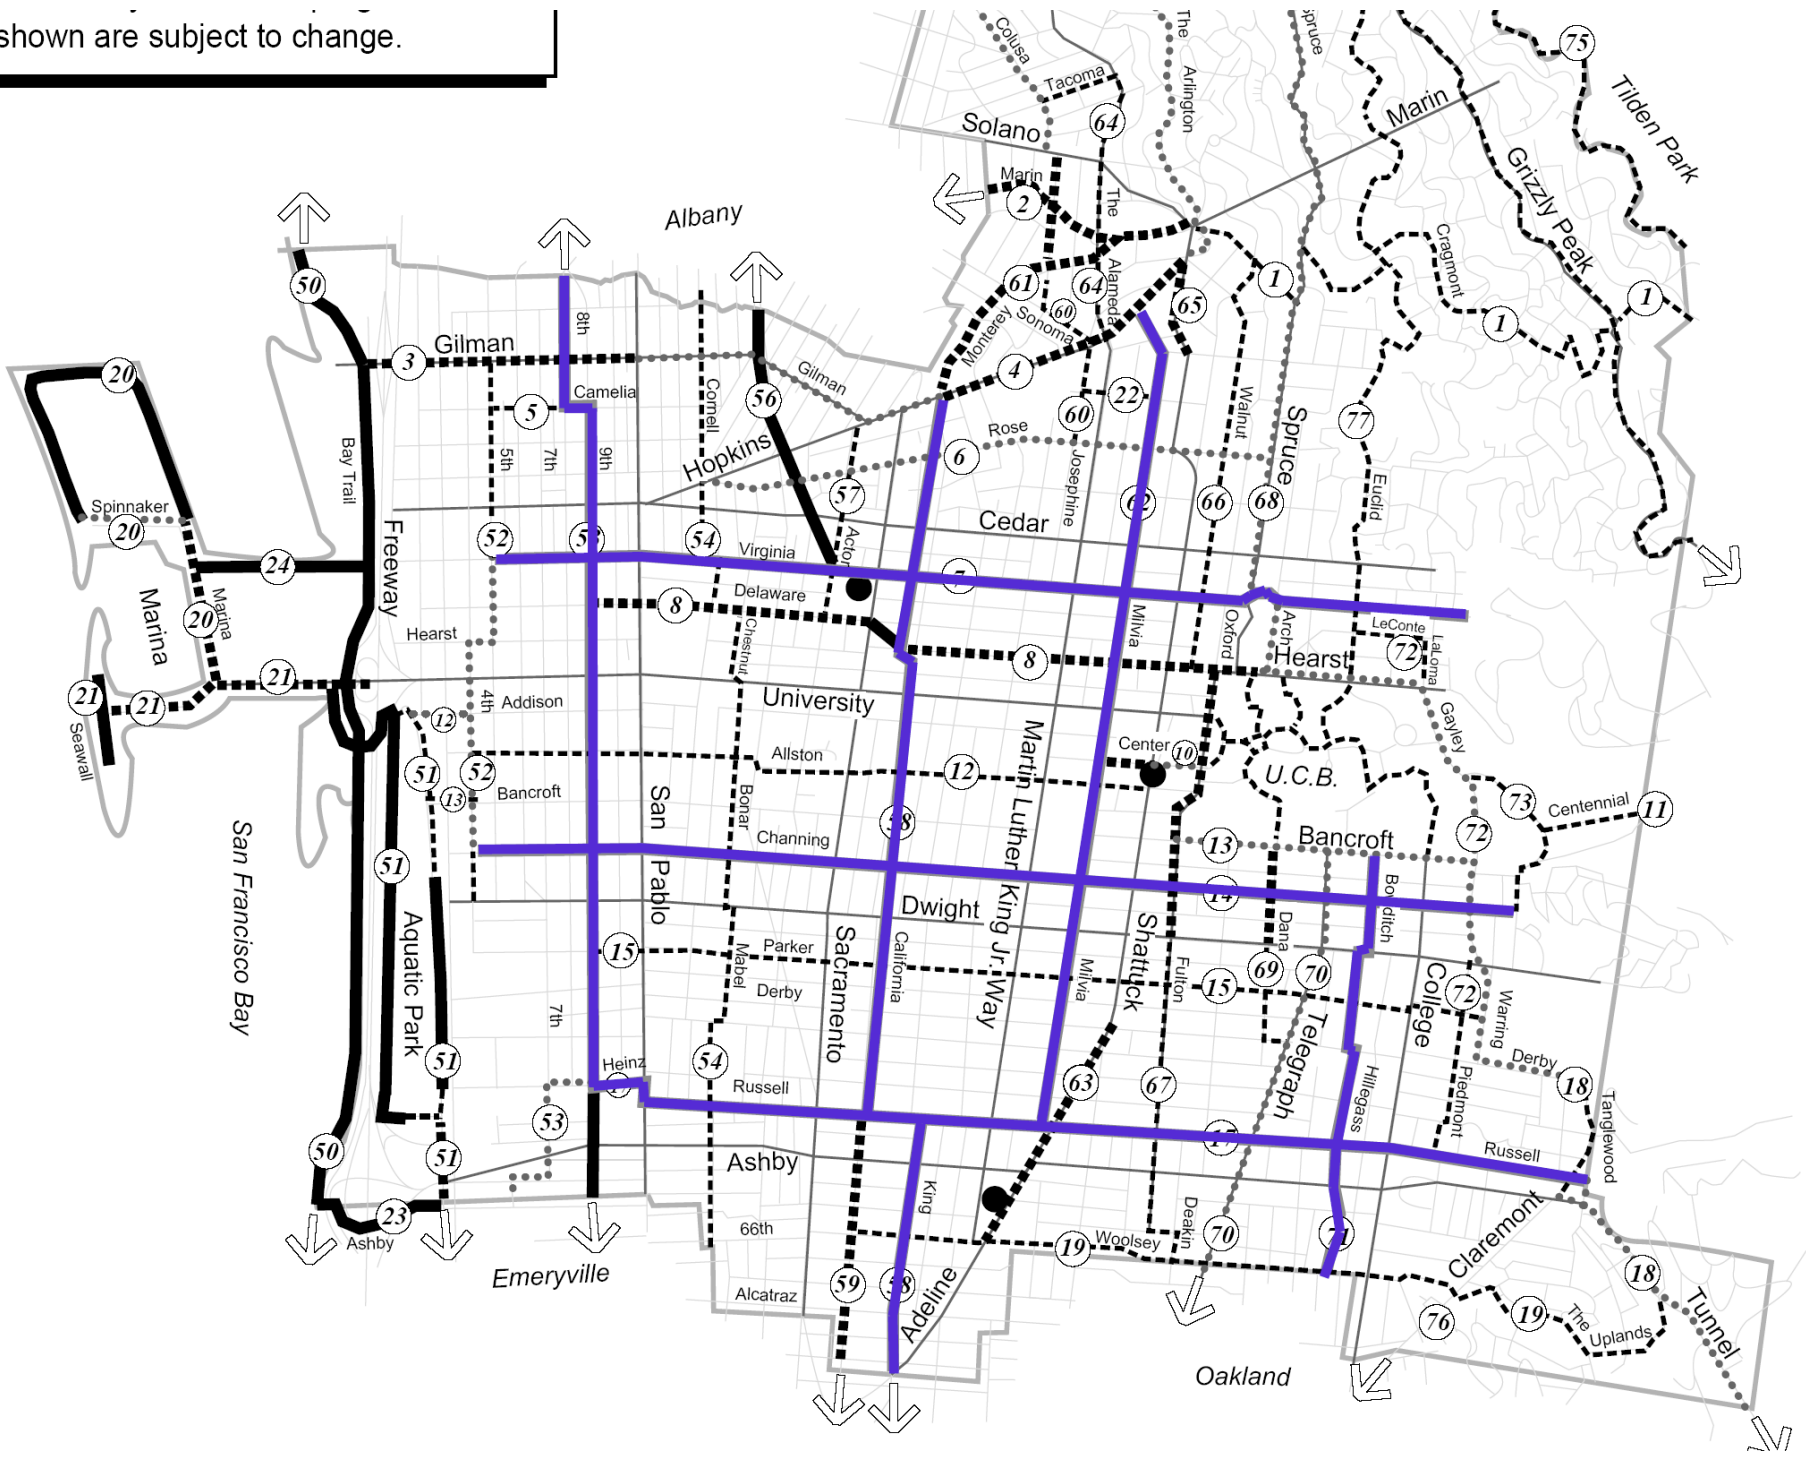

Traffic controls, warning devices, and/or separated facilities at intersections help facilitate safe and convenient crossings of major streets along the Bike Boulevard network.

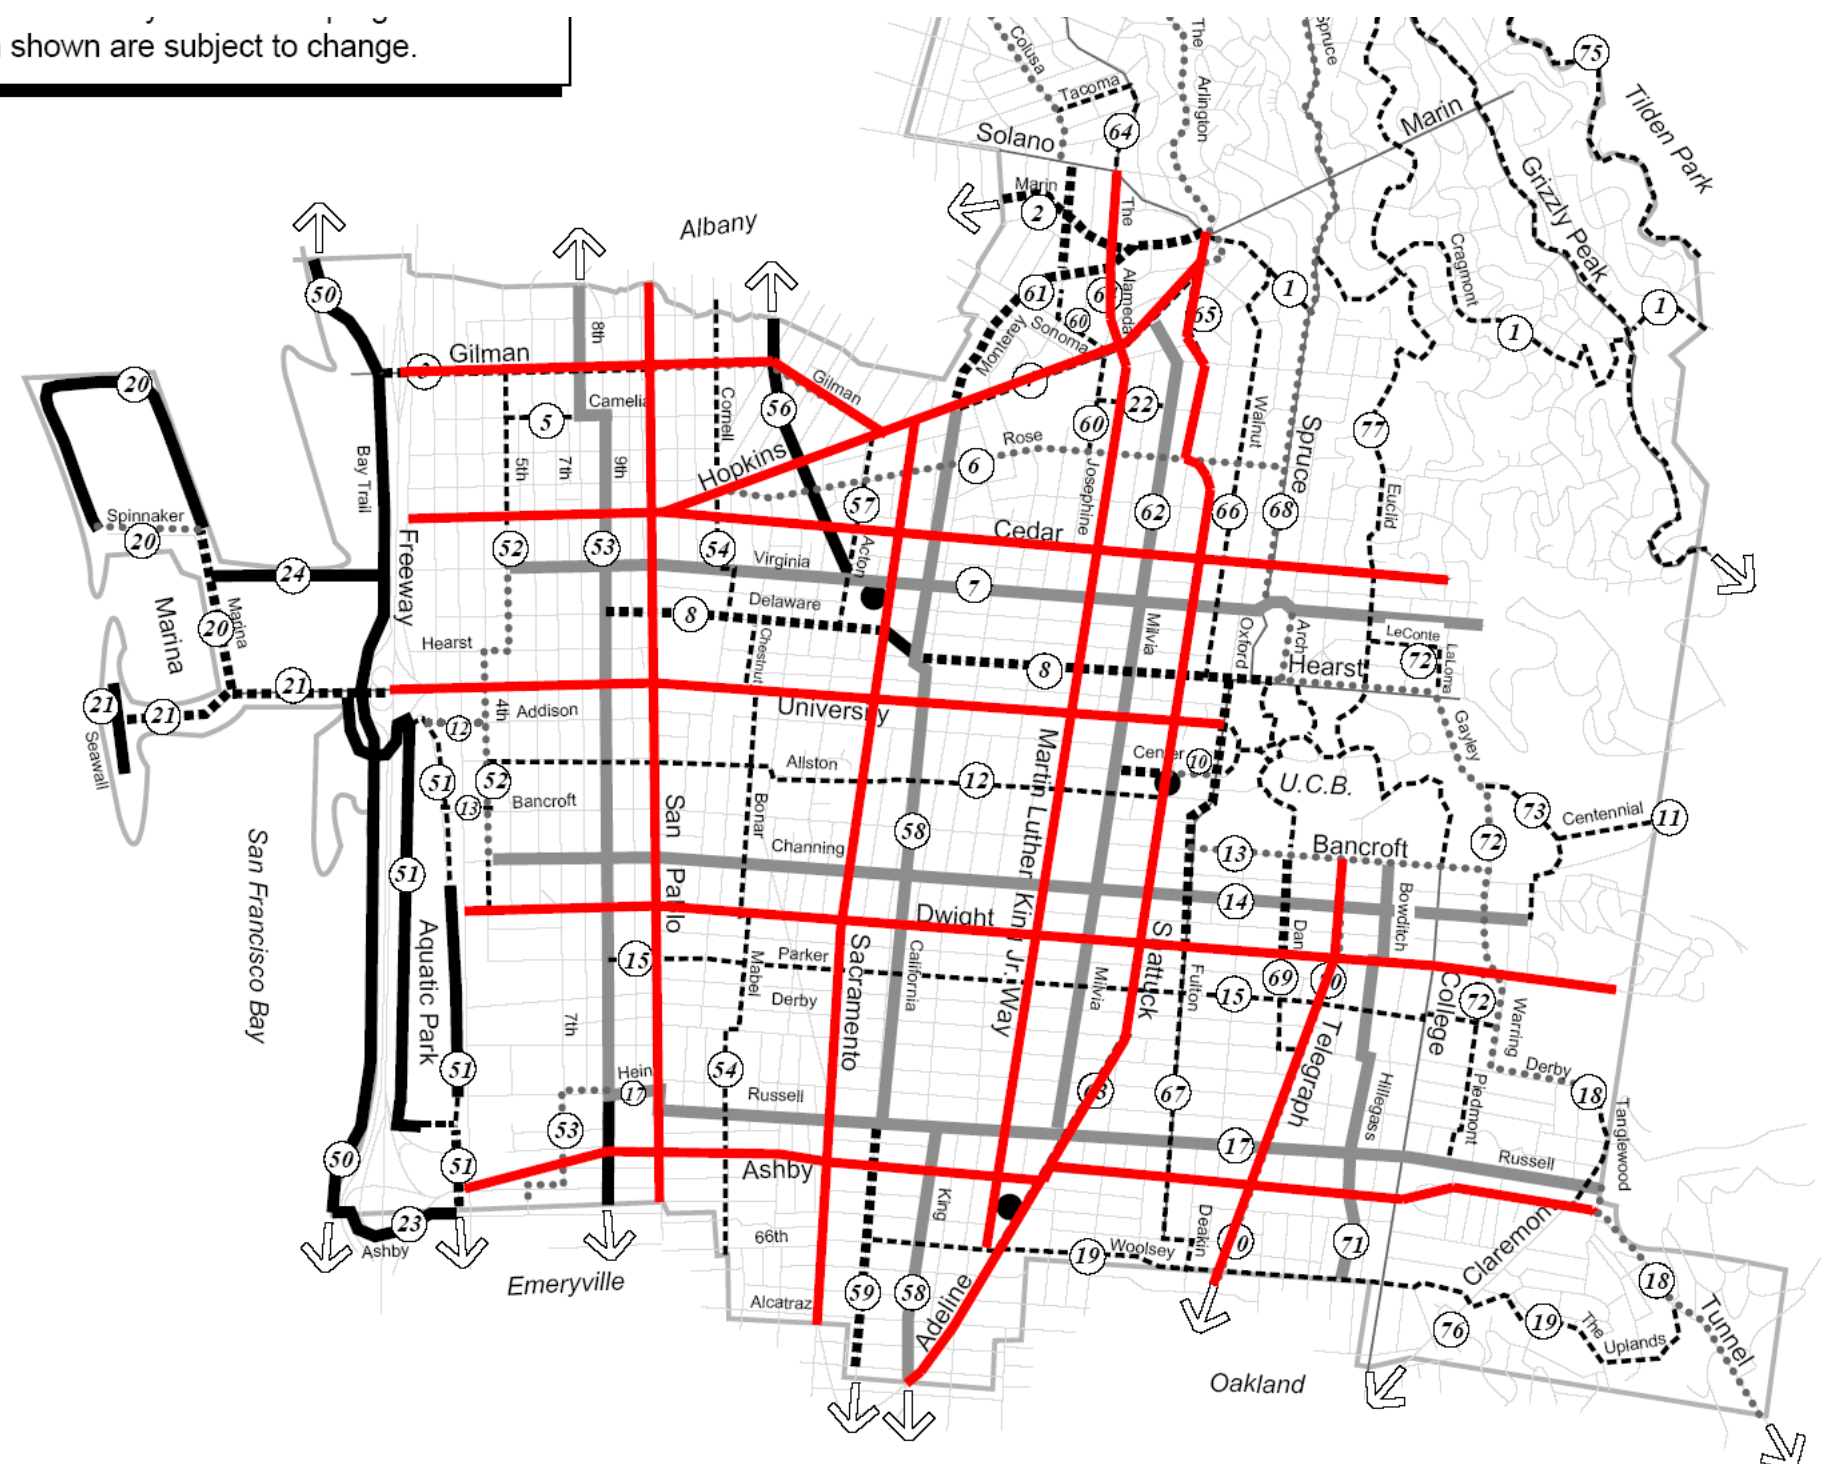

BICYCLE PRIORITY

Traffic calming treatments that prioritize bicycle through-travel and discourage cut-through motor vehicle traffic, such as traffic circles, diverters, chicanes, sometimes in place of existing stop signs.

NEEDS ANALYSIS METHODOLOGY

STEP 1

Public Survey

STEP 2

Level of Traffic Stress Analysis

PUBLIC SURVEY

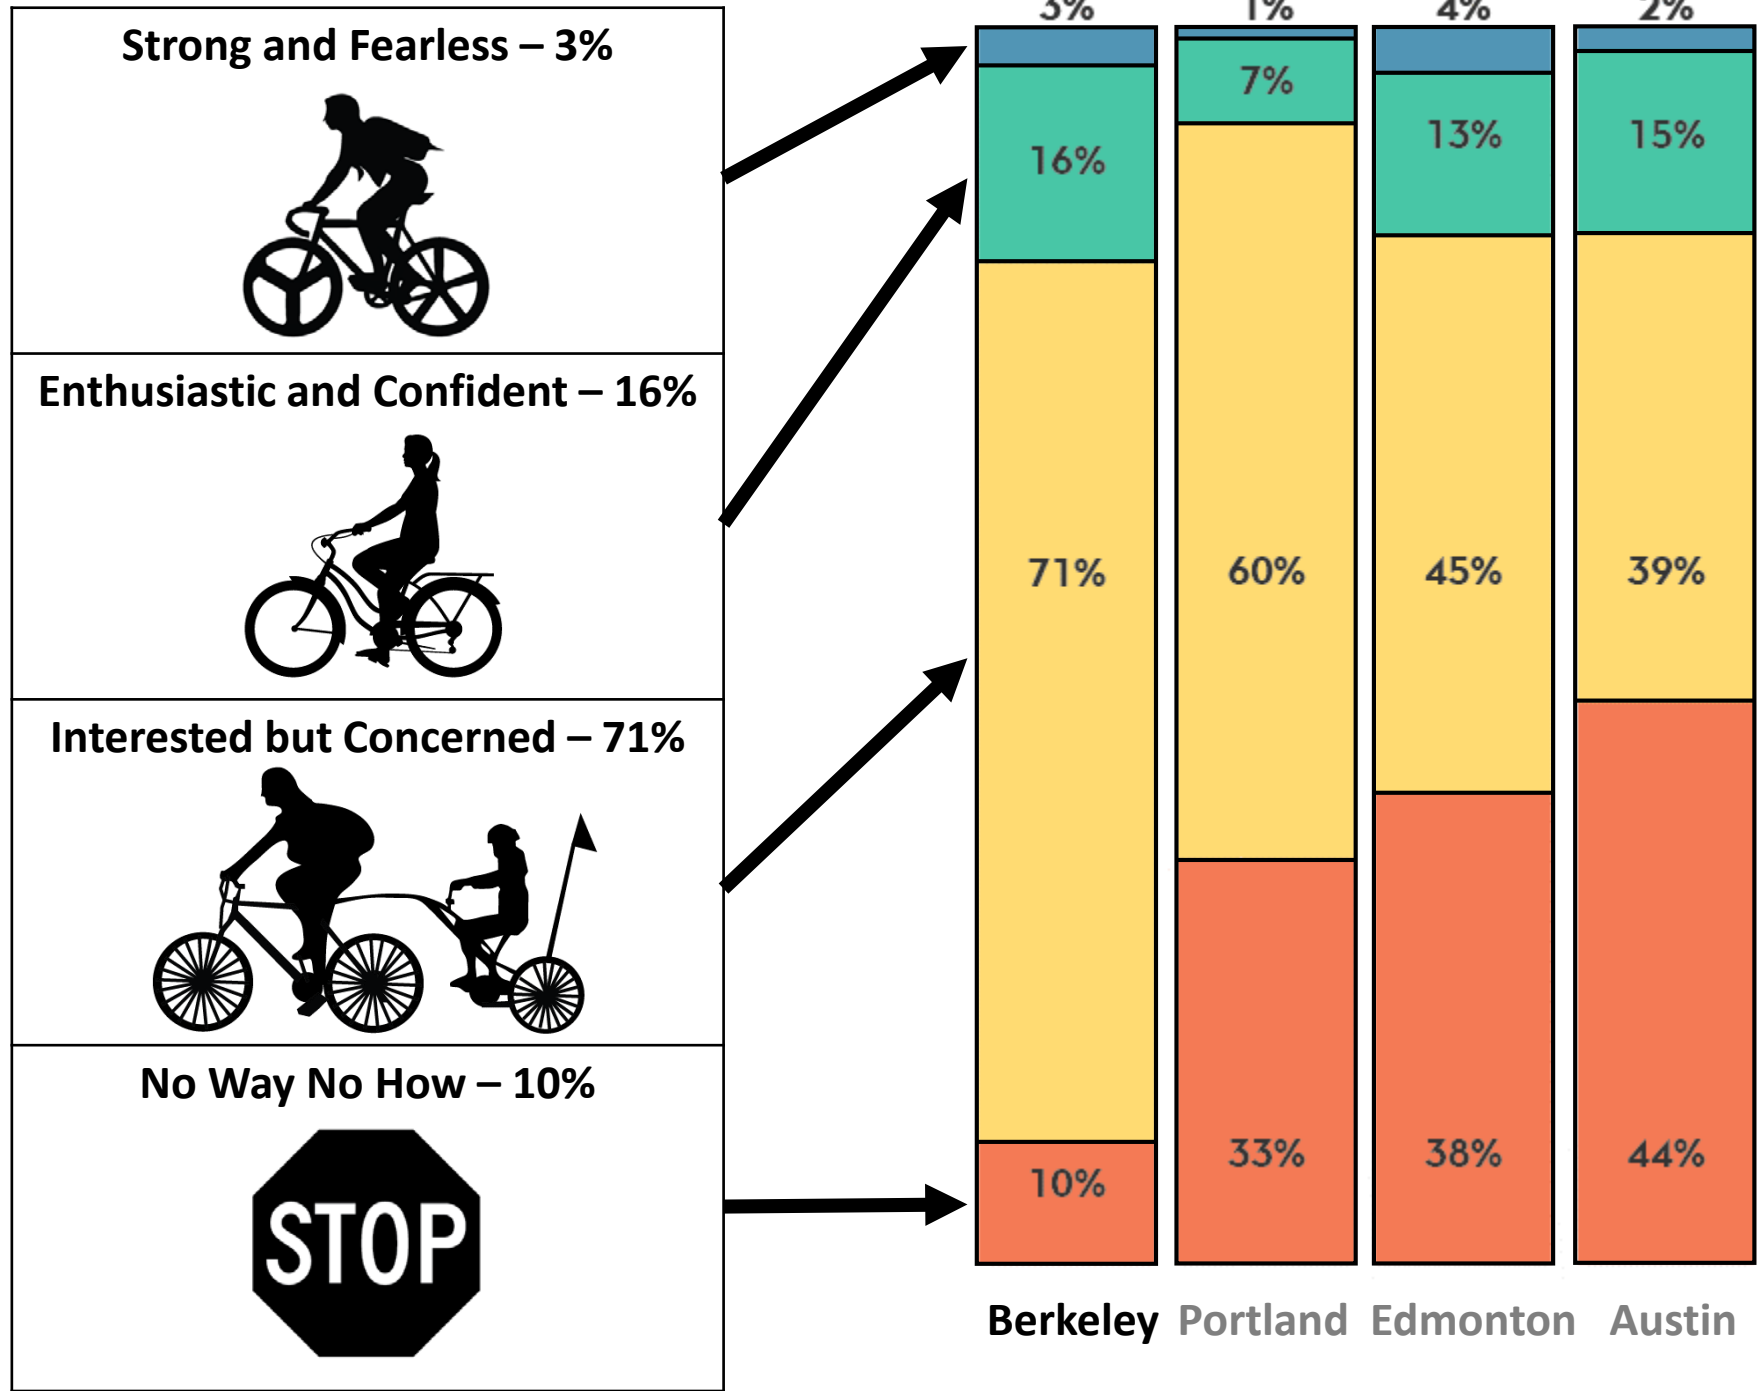

What types of facilities will encourage more residents to bicycle in Berkeley?

FOUR TYPES OF BICYCLISTS

<p>Strong and Fearless</p> 	<p>Enthusiastic and Confident</p> 
<p>Interested but Concerned</p> 	<p>No Way No How</p> 

Tablet-based survey administered by survey firm Civinomics

PUBLIC SURVEY: FOUR TYPES OF BICYCLISTS

PUBLIC SURVEY

A two-lane neighborhood commercial shopping street with faster, busier traffic, on-street car parking, and no bike lane. *

- ☐ Very comfortable
- ☐ Somewhat comfortable
- ☐ Somewhat uncomfortable
- ☐ Very uncomfortable

PUBLIC SURVEY

What if bike markings ("Sharrows") were added? *

Q05 A two lane neighborhood commercial

- ☐ 1 - Very uncomfortable
- ☐ 2 - Somewhat uncomfortable
- ☐ 3 - Somewhat comfortable
- ☐ 4 - Very comfortable

PUBLIC SURVEY

What if a bike lane was added? *

- ☐ 1 - Very uncomfortable
- ☐ 2 - Somewhat uncomfortable
- ☐ 3 - Somewhat comfortable
- ☐ 4 - Very comfortable

Level of Comfort

A two-lane commercial street with a separated bike lane

Residents feel the most comfortable biking on this facility

A four-lane street with a separated bike lane

A residential street with Bicycle Boulevard markings

A quiet, residential street with light traffic

A four-lane street with a buffered bike lane

A two-lane commercial street with "sharrows"

A four-lane street with a bike lane

A two-lane commercial shopping street

A street with two lanes in each direction and a center divider

1
VERY COMFORTABLE

1.1

1.2

1.3

1.4

1.5

1.8

1.9

2
SOMEWHAT COMFORTABLE

2.7

2.8

3
SOMEWHAT UNCOMFORTABLE

3.3

3.6

4
VERY UNCOMFORTABLE

A paved path separate from the street

A two-lane commercial street with a buffered bike lane

A street with two lanes in each direction and a center divider with a separated bike lane

A two-lane commercial street with a bike lane

A street with two lanes in each direction and a center divider with a buffered bike lane

A street with two lanes in each direction and a center divider with a striped bike lane

A four-lane street with faster, heavier traffic

Residents feel the least comfortable biking in this environment

PUBLIC SURVEY

Level of Comfort: How comfortable do you feel riding in different environments, from a 1 (very comfortable) to a 4 (very uncomfortable)?

1.1 Most Comfortable

Class IVA A two-lane commercial street with a separated bike lane

3.6 Least Comfortable

No Facility A four-lane street with faster, heavier traffic

LEVEL OF TRAFFIC STRESS INPUTS

Mineta Transportation Institute *Report II-19: Low-Stress Bicycling and Network Connectivity* (2012).

STEP 1

SEGMENT INPUTS

- Posted speed limit
- Bike lane presence/width
- Number of travel lanes
- Parking aisle presence/width

INTERSECTION INPUTS

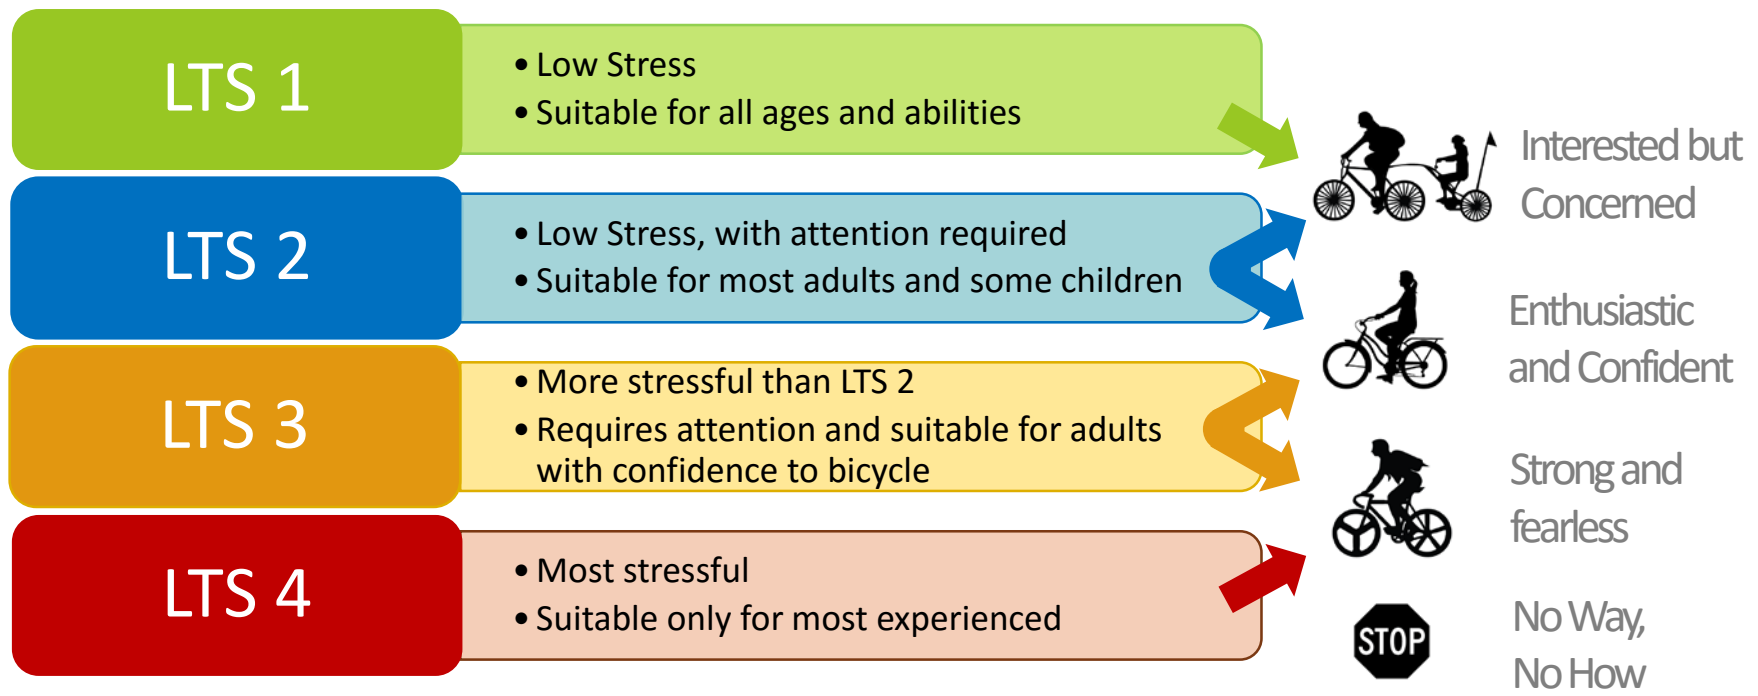

- Posted speed limit
- Presence of median
- Number of travel lanes to cross
- Presence of signal

STEP 2

CALIBRATION

LEVEL OF TRAFFIC STRESS ANALYSIS

Traffic stress is the perceived sense of danger associated with riding in or adjacent to vehicle traffic.

LINKS

Interested but Concerned

Enthusiastic and Confident

Channing Way & San Pablo Ave

LESSONS LEARNED

1. LTS inputs do not necessarily capture the full range of cyclist experience
2. Additional data and calibration may be required; i.e. traffic volumes, etc.
3. Utilize survey results

STEP 2 - LTS CALIBRATION

STREET CLASSIFICATION ¹	TYPICAL POSTED MPH	BERKELEY POSTED MPH	AVERAGE DAILY TRAFFIC (ADT) RANGE ²	LOCAL EXAMPLE
Local	25	25	0-1,500	Channing Way
Collector	30	25	1,501-5,000	Euclid Avenue
Minor Arterial	35	25	5,001 - 12,500	Cedar Street
Major Arterial	>40	25	>12,500	Sacramento Street

1. Street classifications are based on current Berkeley GIS data typology (local, connector, minor and major) and may differ from classifications in the Berkeley General Plan.
2. Traffic volume range is based on average daily traffic data for Berkeley. The street class and the traffic volume range are generally consistent, but there may be exceptions in each category.

STEP 2 - LTS CALIBRATION

LTS (MTI)	LTS (Berkeley)
SEGMENTS	
<ul style="list-style-type: none"> Posted speed limit 	<ul style="list-style-type: none"> Average daily traffic (ADT)
<ul style="list-style-type: none"> Number of travel lanes 	<ul style="list-style-type: none"> Number of travel lanes
<ul style="list-style-type: none"> Presence and character of bicycle lanes 	<ul style="list-style-type: none"> Presence and character of bicycle lanes
INTERSECTIONS	
Unsignalized	
<ul style="list-style-type: none"> Posted speed limit 	<ul style="list-style-type: none"> Average daily traffic (ADT) of cross-traffic
<ul style="list-style-type: none"> Number of travel lanes 	<ul style="list-style-type: none"> Number of travel lanes
<ul style="list-style-type: none"> Bicycle/pedestrian refuge islands 	<ul style="list-style-type: none"> Bicycle/pedestrian refuge islands
<ul style="list-style-type: none"> Presence of a traffic signal 	<ul style="list-style-type: none"> Presence of a traffic signal
<ul style="list-style-type: none"> Right turn lanes 	<ul style="list-style-type: none"> Right turn lanes
Signalized	
<ul style="list-style-type: none"> Pocket bike lane 	<ul style="list-style-type: none"> Segment LTS criteria for bikeway approach <ul style="list-style-type: none"> ADT Number of travel lanes Presence and character of bicycle lanes
<ul style="list-style-type: none"> Right turn lane 	-

STEP 2 – CALIBRATION - INTERSECTIONS

1. Unsignalized Intersections:
Average Daily Traffic volumes
of major street being crossing

2. Signalized *intersections*:
Link LTS score of bikeway
approach to signal.

Level of Comfort

A two-lane commercial street with a separated bike lane

Residents feel the most comfortable biking on this facility

A four-lane street with a separated bike lane

A residential street with Bicycle Boulevard markings

A quiet, residential street with light traffic

A four-lane street with a buffered bike lane

A paved path separate from the street

A street with two lanes in each direction and a center divider with a separated bike lane

A two-lane commercial street with a buffered bike lane

A two-lane commercial street with a bike lane

A street with two lanes in each direction and a center divider with a buffered bike lane

Level of Traffic Stress

TRAFFIC VOLUME	WIDTH*	MTI SCORE	LTS+ SCORE	BIKE TOUR INTERSECTION AND BIKE TOUR SURVEYED SCORE
Without a Crossing Island				
5,001 – 12,500	Up to 3 lanes	2	3	Bowditch Street and Bancroft Way (4) Average LTS = 3.275
>12,500	Up to 3 lanes	3	4	Ashby Avenue and Hillegass Avenue (3.8) Virginia Street and MLK Jr. Way (3.2) Hillegass Avenue and Dwight Way (2.8) Shattuck Avenue and Russell Street (3.1)
5,001 – 12,500	4-5 lanes	3	N/A	(No calibration data from Bike Tour)
>12,500	4-5 lanes	4	4	Telegraph and Woolsey (X.X) MLK and Channing (X.X)
With a Crossing Island				
5,001 – 12,500	Up to 3 lanes		N/A	(No calibration data from Bike Tour)
>12,500	Up to 3 lanes		N/A	(No calibration data from Bike Tour)
5,001 – 12,500	4-5 lanes			Oxford and Hearst (X.X)**
>12,500	4-5 lanes			Sacramento and Virginia (X.X) Shattuck and Virginia (X.X)***

* Streets below 5,000 ADT were not considered as part of this Collector/Arterial street crossing analysis.

** Crossing island and four lanes on south leg of intersection only.

*** Influence of RRFB at this location is not yet fully understood; more study is required. This analysis assumes that because of the increased gaps in traffic it provides, it is equivalent to a crossing island.

Level of Traffic Stress

Table C-4: Level of Traffic Stress Criteria for Unsignalized Crossings without a Crossing Island

Traffic Volume (ADT)	WIDTH OF STREET BEING CROSSED		
	Up to 3 lanes	4-5 lanes	6+ lanes ¹
<1,500 ²	LTS 1	LTS 2	LTS 4
1,501-5,000 ²	LTS 1 or 2 ³	LTS 2	LTS 4
5,001 – 12,500	LTS 3	LTS 3	LTS 4
>12,500	LTS 4 ³	LTS 4	LTS 4

- 1 This table is based on Table 7 in the MTI report, and some of these street configurations (i.e. 6 lane streets with less than 1,500 ADT) do not exist in Berkeley.
- 2 The Bike Tour did not survey LTS scores for intersections with less than 5,000 ADT. As such there is no data to calibrate these <5,000 ADT intersections. However, calibration increased the scores for those streets with up to three lanes and ADT higher than 5,000. As such, calibration is assumed to be needed for similar streets below 5,000 ADT.
- 3 LTS score is context sensitive. In these cases LTS 1 or LTS 2 should be determined on a case-by-case basis based on the specific traffic volume of the street being crossed, including if there are breaks in the flow of traffic. A suggested break-point between LTS 1 and LTS 2 is 3,250 vehicles, median of the 1,501-5,000 range.

Level of Traffic Stress

Table C-5: Level of Traffic Stress Criteria for Unsignalized Crossings with a Crossing Island at Least Six Feet Wide

Traffic Volume (ADT)	WIDTH OF STREET BEING CROSSED		
	Up to 3 lanes	4-5 lanes	6+ lanes*
<1,500	LTS 1	LTS 1	LTS 2
1,501-5,000	LTS 1	LTS 2	LTS 3
5,001 - 12,500	LTS 2	LTS 3	LTS 4
>12,500	LTS 3	LTS 4	LTS 4

* This table is based on Table 8 in the MTI report, and some of these street configurations (i.e. 6 lane streets with less than 1,500 ADT) do not exist in Berkeley.

Level of Traffic Stress

Table C-6: Sample Scoring of Unsignalized Intersection Bikeway (Channing Way) and Other Street (San Pablo Avenue)

CHANNING WAY AND SAN PABLO STREET	LTS (MTI)		CALIBRATED LTS	
	VARIABLE	SCORE	VARIABLE	SCORE
Cross-street posted speed limit / ADT	25 MPH	2	26,500 ADT	4
Number of travel lanes	4	2	4	4
Bicycle/pedestrian refuge islands	No	n/a	No	n/a
Presence of a traffic signal	n/a	n/a	n/a	n/a
Right turn lane	None	n/a	None	n/a
Intersection Score		LTS 2		LTS 4

Level of Traffic Stress

Table C-7: Criteria for Class II Bikeways alongside a Parking Lane

	LTS > 1	LTS > 2	LTS > 3	LTS > 4
Street width (through lanes per direction)	1	(no effect)	2 or more	(no effect)
Sum of bike lane parking lane width (includes marked buffer and paved gutter)	15 ft. or more	14 or 14.5 ft.	13.5 ft. or less	(no effect)
Average daily traffic (ADT) volume*	<1,500 ADT	1,501-5,000 ADT	5,001-12,500 ADT	>12,500 ADT
Bike lane blockage (typically applies in commercial areas)	rare	(no effect)	frequent	(no effect)

(no effect) = factor does not trigger an increase to this level of traffic stress.

* ADT replaces speed limit or prevailing speed from the MTI Report.

Level of Traffic Stress

Table C-8: Criteria for Class II Bikeways Not Alongside a Parking Lane

	LTS > 1	LTS > 2	LTS > 3	LTS > 4
Street width (through lanes per direction)	1	2, if directions are separated by a raised median	More than 2, or 2 without a separating median	(no effect)
Bike lane width (includes marked buffer and paved gutter)	6 ft. or more	5.5 ft. or less	(no effect)	(no effect)
Average daily traffic (ADT) volume*	1,501-5,000 ADT or less	(no effect)	5,001-12,500 ADT	>12,500 ADT
Bike lane blockage (typically applies in commercial areas)	rare	(no effect)	frequent	(no effect)

(no effect) = factor does not trigger an increase to this level of traffic stress.

*ADT replaces speed limit or prevailing speed from the MTI Report.

Table C-9: Criteria for Class III Bikeways

TRAFFIC VOLUME (ADT)	2-3 LANES		4-5 LANES	6+ LANES
<1,500	1 or*	2	3	4
1,501-5,000	2 or*	3	4	4
5,001 - 12,500	4	4	4	4
>12,500	4	4	4	4

*Use lower value for streets without marked centerlines or classified as residential and with fewer than 3 lanes; use higher value otherwise.
